

Step up to “X12/X12 Reader” Software

Initial Price:

X12 - \$2500 per District

X12 Reader - \$1000 per District

Annual License after first year:

X12 - \$1000 per District

X12 Reader - \$500 per District

X12 Medicaid Billing Software and Reader

If you have the Billing software from Spartanburg 7 or use the RBHS software from MDS Computer Services, you can now create billing files to import directly to SC Medicaid in the X12 format. This means you can bill Medicaid in the fastest way possible, and not have to manually enter the claims through their website.

What the X12 software does:

After you export a billing file from RBHS or SP7's billing app, you import that file into the X12 billing software. You will enter a few things, such as the date, your name, and telephone number. With a press of a button, the file you imported is converted into a HIPAA regulated file and saved on your computer. You then can export that file directly to SC Medicaid. NOTE: You will have to be setup through Medicaid to remit electronic files, by obtaining a Transmitter ID. We will provide you with a link to SC Medicaid to get your District setup.

What the X12 Reader does:

Medicaid communicates back on their site using X12 files. If you submit a billing file to them, they return files back to you in X12 format that explain if the file passed or didn't pass (997's). They also return files that show if payment was rendered known as a Remittance Advice. (835's). The X12 Reader lets you download these files back from Medicaid and puts them in a readable report.
